Manage and Audit Your Data Center Assets from the Palm of Your Hand

Sunbird's dcTrack® DCIM Operations Mobile App is changing the way Data Center Managers interact with their DCIM. Manage and visualize assets from the palm of your hand through a simple yet effective user interface, a must-have for managing data center operations in today's ever-changing business environment. Never again will you need to waste time walking the data center floor, writing down changes, and finally implementing them back at the office. The app features multiple ways to add, edit, and move assets—all from your smartphone or other mobile device—to simplify and speed up your on-site audits.

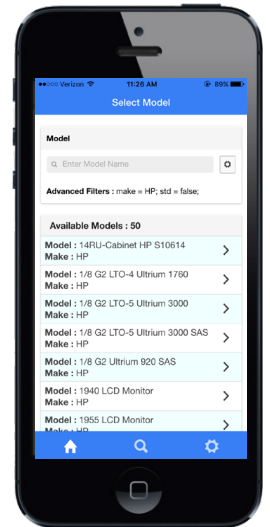

Manage All Locations from Anywhere in the World

No need to carry multiple devices to manage all of your different data centers. Whether you manage one location or multiple sites, you can search and access asset information from a single user-friendly interface. Add new assets, update details, and manage moves, adds, and changes without leaving the app.

Add New Items with Just a Few Clicks

Make manual entry a thing of the past. The app's search functionality accesses the same Models Library, found in our full-feature DCIM solution, so you can select your assets from the 30,000+ available items prepopulated with error-free details.

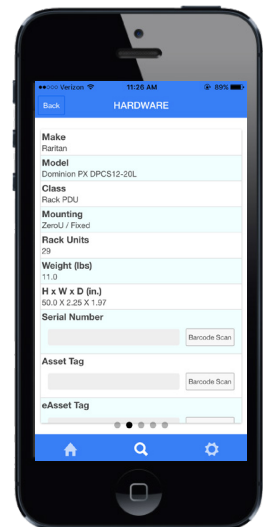

Locate and Edit Assets with Ease

Pinpoint an asset with an advanced barcode scanner built into the app or use one of many supported external barcode scanners. Search for an asset, and when located, effortlessly edit the item's information, including hardware, identity, maintenance, placement, and images.

Smart Models Provide Detailed Specifications

Use the intelligent Models Library to easily add new assets without the need to design images or re-enter associated specifications. Edit the model name and add or edit a serial number, asset tag, or eAsset tag.

Data Sheet

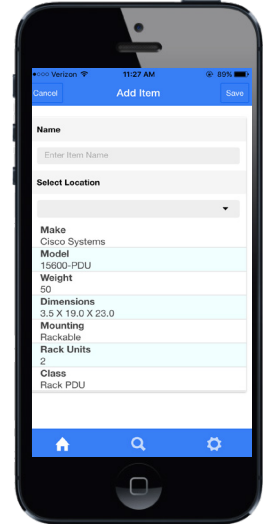

Access Maintenance Details

Protect your assets by tracking maintenance contract renewals. Add a project number, PO number, purchase price, purchase date, installation date, SLA profile, contract number, contract amount, contract start date, contract end date, and additional notes.

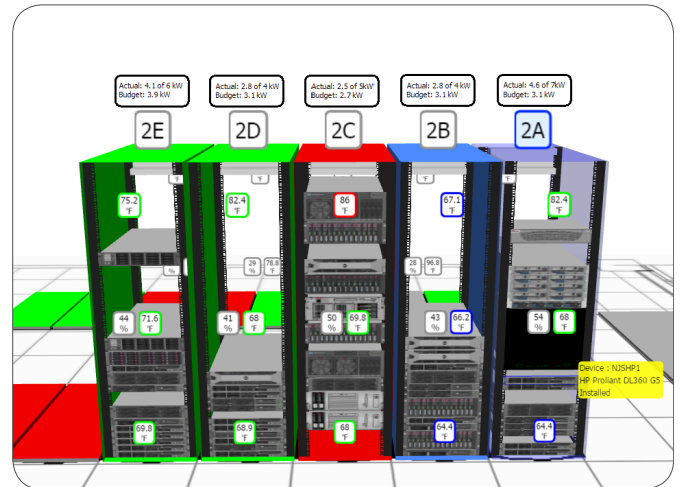

Identify Your Assets

Clearly identify your assets with unique names and identifiers. Change or edit the name, alias type, function, system admin, system admin team, and customer for a specific asset.

Visualize Your Assets with the Mobile Web Browser

Visualize racks and their space just as if you were in front of the rack. Add, change, or remove photos of the asset for the visual representation that best fits your setup.

Sunbird Software is changing the way data centers are being managed. With a focus on real user scenarios for real customer problems, we help data center operators manage tasks and processes faster and more efficiently than ever before, while saving costs and improving availability. We strive to eliminate the complexity they have been forced to accept from point tools and home grown applications, removing the dependency on emails and spreadsheets to transform the delivery of data center services. Sunbird delivers on this commitment with unexpected simplicity through products that are easy to find, buy, deploy, use, and maintain. Our solutions are rooted in our deep connections with our customers who share best practices and participate in our user groups and product development process.

Based in Somerset, NJ, Sunbird serves nearly 1,000 DCIM customers worldwide. For more information, please visit SunbirdDCIM.com.
